

YOUR LIFE MAY BE A MESS, BUT THERE'S HOPE FOR YOUR MICROTOME!

Works with most
Leica, Microm and
Shandon Finesse
Microtomes!

Maybe we can't always get our ducks in a row, but we can help get your blocks perfectly aligned on your microtomes every time, everyday! With the Microtome Aligners you may actually look forward to recuts!

Between the **three models**, the majority of microtomes can be aligned. It's like finding the "missing piece" that was never delivered with your microtome!

Picture an easy to use device that **was designed by histologist for histologists.**

Here's the Idea:

- 👉 The same Aligner may work on all your microtomes depending on which models you use.
- 👉 You only need one unit per laboratory and it'll last forever!
- 👉 Use once per week to keep all microtomes perfectly aligned to each other,
- 👉 After a difficult tissue,
- 👉 After a bony tissue,
- 👉 Or use it before a biopsy (just to make sure you're still in alignment with the other units)

Product Description	Volume	Order #	Price
